RACK PROTECTOR EQUIPMENT SPECIFICATION

To ensure proper protection consider the following:

- Measure the overall length of area that is to be protected.
- Is there a protruding object or other unusual configuration to measure? (i.e. going around corners)
- Is this a single or double end application? (exposure to traffic is they key factor)
- Place protection equipment as close as possible in front of the area in need of protection while still providing an adequate barrier space to achieve proper installation.
